

Equipment For Tough Terrain

Land Clearing Series - *LCS-01 Slasher*

Our Land Clearing Series is designed to be environmentally friendly and can easily handle challenging and various topography. The LCS-01 Slasher consists of a dedicated hydraulic power pack and land clearing head mounted on your choice of tracked carrier unit. The Slasher head can cut up to 8 inches deep and 10 ft wide. Built upon our RRS-01 Crusher technology, it is robust and handles rock in the soil with ease. Mountainous brush, dense forest, or orchards are easily reclaimed with an ecological mindset to achieve long term sustainability of resources.

One Pass Up. One Pass Back.

You're done. Standing trees, brush, and stumps easily succumb to the Slasher's 10-foot-wide mouth. The Slasher mulches as it works and incorporates debris back into the soil to create a stable base. Say goodbye to burning and root raking!

Applications

- Fire breaks
- Land clearing and reclamation
- Orchard clearing
- Subsoil mixing and site prep
- Right-of-way and trail maintenance
