

Equipment For Tough Terrain

Rock Remediation Series - *RRS-01 Crusher*

Our Rock Remediation Series is designed to handle the rockiest terrain, toughest concrete, and even asphalt. The RRS-01 Crusher was engineered to provide a robust, effective, and efficient means of processing consolidated material without the need for multiple pieces of equipment. Our product consists of a dedicated hydraulic power pack and rock crushing head mounted on your choice of carrier unit. The crusher head can cut up to 12 inches deep and is available in an 8 foot or 10 foot width.

Starting in 2024, the crusher line will have a next generation power pack. The next generation power pack has been designed for reliability, ease of maintenance, and to meet the EPA requirements of Tier 4.

Applications

- Slab and large embedded rock processing
- Large free rock processing
- Gravel and asphalt road reclamation
- Subsoil mixing and site prep
- New road and firebreak cutting
- Right-of-way and trail maintenance
