

Equipment For Tough Terrain

Rock Remediation Series - RRS-10-160

The RRS-10 Crusher is IronWolf's second generation material processing head that is powered by the carrier unit's auxiliary circuit and offers an unprecedented level of flexibility and versatility.

Built to bring the performance of our RRS-01 Crusher to a more compact and affordable package, this attachment does not require a dedicated carrier unit. This offers a new level of portability and versatility that has applications in residential settings as well as large commercial job sites as the size of the equipment facilitates rapid deployment and minimal environmental impact during operations.

New patent-pending material processing methods provide the ability to take heavy cuts yielding 3" minus material and finish material to 1/2" minus with a single piece of equipment.

Applications

- Slab and large embedded rock processing
- Large free rock processing
- Gravel and asphalt road reclamation
- Subsoil mixing and site prep
- New road and firebreak cutting
- Right-of-way and trail maintenance

Specifications

- Two speed direct drive, 40 gpm, 5,000 psi
- 3,250 lb gross weight
- Adjustable depth of cut up to 2 in.
- Universal skid steer quick attachment
- Minimum 95 HP, Recommended 110 HP carrier unit
- Wear plates to protect carrier unit
