

Equipment For Tough Terrain

Rock Remediation Series - RRS-10-160

Built to bring the high performance of our larger RRS-01 Crusher to a compact and accessible package, the RRS-10 Crusher is IronWolf's second generation material processing head that is powered by the carrier unit's auxiliary circuit. This offers an unprecedented level of portability, flexibility, and versatility that has applications in residential settings as well as large commercial job sites with minimal environmental impact during operations.

New patent-pending material processing methods efficiently take heavy cuts yielding 3" minus material and finish material to 1/2" minus in one pass by containing the rock within the processing head. Our industry unique two-speed motor effectively crushes slab and large free rock bringing you an unparalleled rock remediation solution with a competitive edge.

Specifications

- Two-speed direct drive, 40 gpm, 5,000 psi
- 3,250 lb gross weight
- Adjustable depth of cut up to 2 in.
- Universal skid steer quick attachment
- Minimum 95 HP, Recommended 110 HP carrier unit
- Wear plates to protect carrier unit

Applications

- High Torque Low Speed for slab and large embedded rock processing
- Low Torque High Speed for large free rock processing
- Gravel and asphalt road reclamation
- Subsoil mixing and site prep
- New road and firebreak cutting
- Right-of-way and trail maintenance
